SafeSealWrap

SAFE SEAL WRAP

Galvanised Scaffold Steel Clips

Secure and dependable, Safe Seal's Galvanised Scaffold Steel Clips are built for tough job sites where strength and reliability matter. Designed to hold shrink wrap, plastic sheeting, or netting in place during construction, these clips are ideal for attaching materials to scaffolding, containment structures, and temporary enclosures.

With a wide opening for easy fastening, they grip securely to steel or aluminum tubes and can be used to stabilise wrap during high winds, or create access tunnels and temporary barriers as needed.

Thanks to their galvanised finish, they offer corrosion resistance and long-term reusability — perfect for multiple job sites and repeated use.

MATERIAL:	Galvanised steel
COLOR:	Silver
UNIT WEIGHT (G):	170g

Precautions:

Ensure clips are properly fastened to stable scaffold or support frames. Always wear gloves when installing to avoid injury from edges. Not intended to be used as structural support or lifting components. For maximum durability, avoid excessive bending or forceful prying during removal.

Applications:

Galvanised Scaffold Steel Clips are used across construction, industrial, and marine projects to fasten shrink wrap, debris netting, or plastic sheeting to scaffolding or other framing. Common applications include containment enclosures, weatherproofing, dust control, and access tunnel construction. Suitable for both indoor and outdoor projects, especially where repeated use and high performance are required.
